

5-9V DC Water Pump - Submersible Mini Water Pump

Working principle:-

This is a low cost, small size Submersible Pump Motor which can be operated from a 3 ~ 9V power supply. It can take up to 120 liters per hour with very low current consumption of 220mA. Just connect tube pipe to the motor outlet, submerge it in water and power it. Make sure that the water level is always higher than the motor. Dry run may damage the motor due to heating and it will also produce noise.

Specifications:-

Operating Voltage : 3 ~ 9V

Operating Current : 130 ~ 220mA

Flow Rate : 80 ~ 120 L/H

Maximum Lift : 40 ~ 110 mm

Continuous Working Life : 500 hours

Driving Mode : DC, Magnetic Driving

Material : Engineering Plastic

Outlet Outside Diameter : 7.5 mm

Outlet Inside Diameter : 5 mm

Features:

1. When diving the water pump into the water, the water level is higher than the pump. The low level of the water will cause the temperature too high, so the noise of the pump will be large.
2. Land use need to allow water to flow into the pump (non self-priming pump), the installation of water level higher than the pump.
3. To keep the water clean, so as not to block the pump rotor. the pump should be cleaned regularly to keep the pump clean.

Package Included:

1 X Water Pump
